FOR QUESTIONS REGARDING SDARM MOUNTING**

SCIMITAR SDARM DRILL TEMPLATE

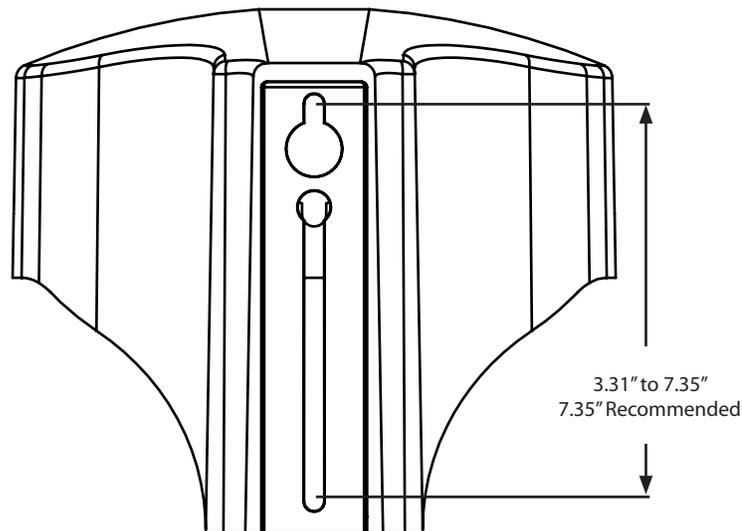

The SDARM was designed with a slotted opening for the lower all-thread rod to allow the fixture to be mounted to an existing drill pattern. The existing pattern cannot exceed 7.35" between the two all-thread rods. The existing pole side nut plate may need to be utilized in mounting to a non-Techlight drill pattern. Existing nut plate and drill pattern must accept 3/8" diameter bolts/all-thread.

Both the standard Techlight SSA and VSA drill patterns are compatible with the SDARM.

SDARM DETAIL

NOT TO SCALE

Techlight cannot account for all the mounting variations that may occur with products from other manufacturers. It is the sole responsibility of the customer to verify that the SDARM will be compatible with an existing drill pattern. Techlight will assume no liability for costs incurred if the SDARM will not mount directly to an existing drill pattern.
